

UK HIGH STREET BANK

CLIENT CHALLENGE

GROWING OUT OF MERGERS & ACQUISITIONS, CLIENT' APPLICATION LANDSCAPE WAS COMPLEX,

SIMPLIFICATION OF TECH LANDSCAPE WAS NEED OF THE HOUR

LACK OF SME EXPERTISE FOR LEGACY APPLICATIONS

MISSING DATA GOVERNANCE

UNMANAGED OPERATIONAL RISK

THE JOURNEY

We **established process improvements** to ensure efficient decommissions, **built** the technical architecture of their application stack and **created** a process for data retention and retrieval.

We helped in creating the **technology rationalisation approach** and **plan**. We helped the bank classify applications into **strategic and non-strategic** categories.

We **managed coordination** between Application, Infrastructure, Legal, Data Governance, Data Custodians and business teams resulting in reduced lead times for decommissioning. We **worked with their regulatory teams** to understand governance policies that needed to be applied.

We continue to ensure the realisation of cost reductions throughout the programme, as well as provide high quality **data archival, decommissions** and **run to retire services**. The team on the ground is committed to identify further improvements for the control processes and activities for other services within the bank.

KEY IMPACT
